

webagain™

**The Ultimate Web Site Protection Utility
Automatically Fixes Hacked Web Sites**

WebAgain is the premier web site anti-defacement software utility. It keeps a round-the-clock vigil over your web site to ensure that your visitors see the information you want them to see. WebAgain automates the tedious and time consuming web site verification and defacement correction process. It automatically detects when any change has been made to your web site and republishes the appropriate information in seconds without taking your web site offline!

Your web site is your company's most valuable, visible and vulnerable asset. Hackers can change your web site at whim, vandalizing your opening page with graffiti, posting false press releases, changing pricing information and redirecting sales traffic, just to name a few.

Do not let your web site become a billboard for misinformation. Minimize the effects that defacements can have on your customers, suppliers, and shareholders. Protect your web site with WebAgain today.

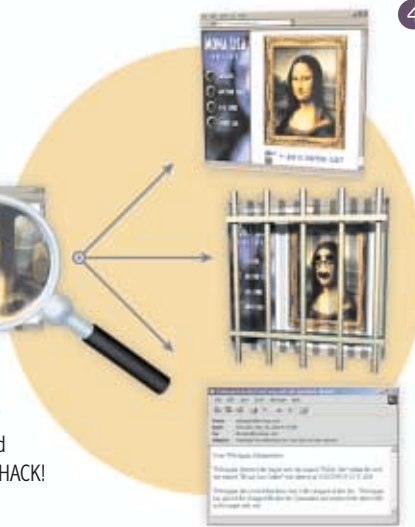

How WebAgain Works

1 Send your web site pages to WebAgain.

3 WebAgain checks your web site and DETECTS A HACK!

4 WebAgain instantly republishes the appropriate pages.

5 WebAgain sends copies of the hacked pages to the Quarantine area for offline inspection.

6 WebAgain sends an e-mail notification to inform you of the repair.

Automatically Fixes Hacked Web Sites

"Custer Hack"

"Mardi Hack"

Product Highlights:

Automatically Repairs Defaced and Vandalized Web Sites -

WebAgain detects any modifications made to your web site files, whether it's an obviously altered image or a subtle text change. After any unauthorized change is detected, WebAgain republishes your original web site pages - in seconds!

Scans Your Web Site for Hacks -

WebAgain checks for alterations as frequently as you want. Set up additional scanning schedules to provide even more protection.

Sends E-Mail Notices and Quarantines Defaced Pages -

WebAgain sends e-mail to your System Administrator, Webmaster, and anyone else who needs to be notified when unauthorized changes are made to your web site. It stores copies of the hacked pages in the Quarantine, allowing you to inspect the changes off-line.

Detects Additional or "Extra" Web Site Files -

Protect your web server from being used as a Zombie server, where hackers use your equipment without your knowledge or permission to share illegal files. WebAgain automatically detects when extra files have been added to your web site and removes these unauthorized files.

Works with your Web Publishing Software -

Keep using your favorite web publishing tools to produce web pages. When you are ready to post new pages, simply direct your web publishing software to publish to the WebAgain Server.

Simultaneously Publishes to Mirror Sites -

Publish once to WebAgain and it sends your updates to all mirror sites simultaneously. If one site is offline, WebAgain will keep trying to send the new information until it is live on the WWW.

Archives Web Site Content and Stores Multiple Revisions -

The Archive stores as many revisions of your web site as you like, allowing you to republish your web site to any point-in-time.

Single Installation Can Protect Multiple Web Sites -

Install WebAgain once and protect multiple web sites. A license is required for each additional web site.

Protects Web Sites Hosted on Any Platform, Anywhere -

WebAgain can protect sites that run under UNIX, Linux, or Windows, and are hosted on-site or at a third-party location.

Creates Web Site Specific Rescue Kit -

WebAgain produces a convenient Rescue Kit that stores a backup of your web site and content archive. With the Rescue Kit, you can get your web site up and running in the event of a disaster. Great for off-site storage.

Automatically Imports or "Harvests" Web Site Files -

Get up and running fast by importing your existing web site into the Archive, which allows WebAgain to immediately start scanning for hacks.

Saves Time & Money -

Eliminates the need for time consuming manual web site repair and maintenance.
